```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antiblotics, the essential genes themselves and the discovery of novel antiblotics, the essential genes themselves and the discovery of novel antiblotics, the essential promomonia, Pseudomonias acruginosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

The advantage of this change is that the limiting factor for the prodn. of elfamycin by actinomycetes is removed by mutating the gene tuf into tuff encoding a protein, resistant to the elfamycin, pref. mocimycin (Kirromycin). The inventors claim EF-TuR and the genes (tufR) encoding it.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           valine, threonine, proline or phenyalanine results in an elfamycin resistant protein (EF-TuR). The advantage of this change is that the limiting factor for the prodn. Of elfamycin by actinomycetes is removed by mutating the agene tuf into tufR encoding a protein resistant to an elfamycin, pref. mocimycin (Kirromycin). The inventors claim EF-TuR and the genes (tufR) encoding it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Substitution of residue 378 of the elongation factor (EF-Tu) with

                                                                                                                                                                                                                                                                                                                                                                                                                                                      Substitution of residue 378 of the elongation factor (EF-Tu) with a valine, threonine, proline or phenyalanine results in an elfamycin resistant protein (EF-TuR). The advantage of this change is that the limiting factor for the prodn. of elfamycin by actinomycetes is removed by mutating the gene tuf into tuff sencoding a protein esistant to an elfamycin, pref. mociangin (Kirromycin). The inventors claim EF-TuR and the genes (tufR) encoding it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GTCGACCACGGAAAGACCACTCTCACCGCCGCGCTCATGGTGCT-----CGCCTCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                             Substitution of residue 378 of the elongation factor (EF-Tu) with a valine, threonine, proline or phenyalanine results in an elfamycin resistant protein (EF-TuR). The advantage of this change is that the limiting factor for the prodn. Of elfamycin by actinomycetes is removed by mutating the gene tuf into tuff encoding a protein resistant to an elfamycin, pref. mocimycin (Kirromycin). The inventors claim EF-TuR and the genes (tufR) encoding it.

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     6881 AIGGACGCCCATCCTCGTGGTTGCTGCTACCGACGCCCCGATGCCTCAGACTCGCGAG 6940

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       XXXX
                                                                                                                                                                                                                                                                                                                                                              The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes thanselves and the discovery of novel antibiotics, the essential genes thanselves and the encoded proteins. The prokaryotes used are netwinding, pseudomonas aeruginosa and Enterococcus faccalis. The promeunoniae, pseudomonas aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets of or antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins can be used to screen compounds in rational drug discovery for homologous nucleic acids which are required for cell proliferation in essential prokaryotic callular proliferation protein.

Commanded the printed specification, but was obtained in electronic command directly from MIPO at the way obtained in electronic commanded to the printed specification, but was obtained in electronic
